

COLT AND GREENVIEW PROJECT

TC Energy periodically provides information beginning at the early stages of project development, including prospecting, and continuing throughout the life of assets. The information provided is intended to inform stakeholders and Indigenous groups of our proposed activities and provide the opportunity to provide meaningful input or feedback. As planning progresses and new information becomes available, details may change from the time of this printing.

Overview

TC Energy’s NGTL System delivers energy to millions of North Americans every day as an essential part of the TC Energy pipeline network. NGTL GP on behalf of NGTL Limited Partnership is proposing to construct, own and operate the Grande Prairie Mainline Loop No. 3 - Colt Section and Grande Prairie Mainline Loop No. 3 - Greenview Section (the Project) to enhance natural gas transportation to meet growing demand in Alberta, providing secure and reliable energy when and where it’s needed most.

The proposed Project would be installed adjacent to the existing Grande Prairie Mainline(s) to increase capacity while minimizing environmental and land disturbances.

NGTL GP anticipates filing an application with the Commission of the Canada Energy Regulator (CER) in Q4 2025, with a targeted commercial in-service date in Q2 2028.

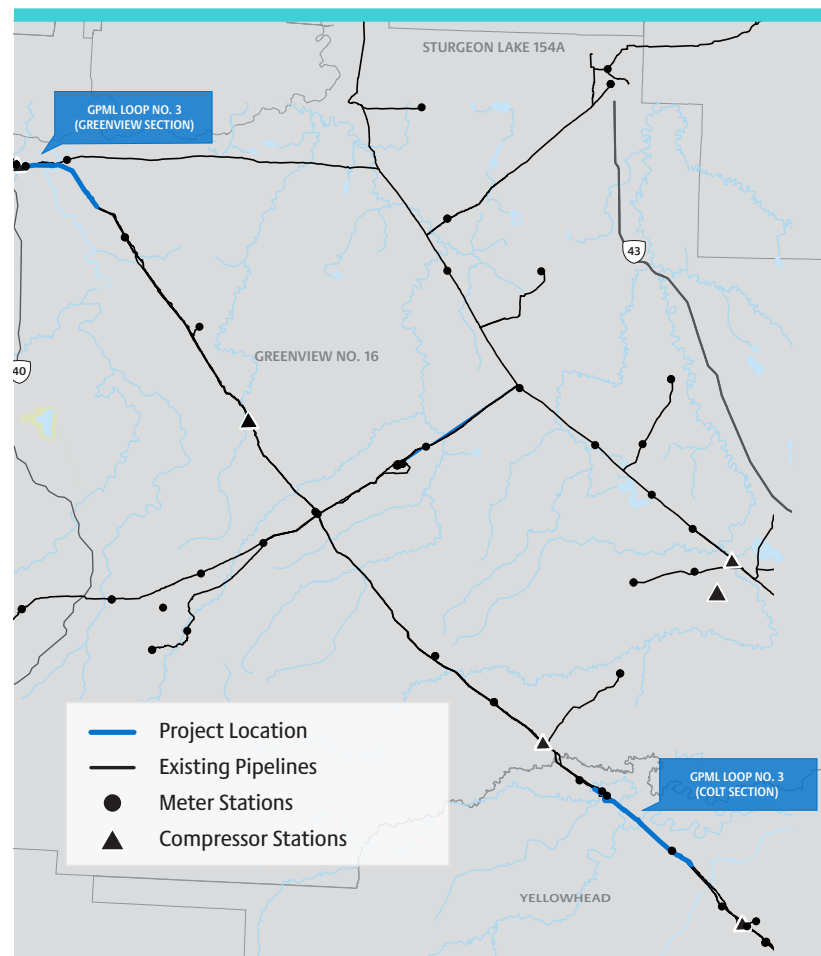

Project scope

The proposed Project consists of two looping sections of pipeline. The proposed Colt section originates near an existing valve site within NW 36-57-23 W5M, approximately 55 kilometres northwest of Edson, Alberta extending approximately 17km southeast to an existing valve site within SE 31-56-21 W5M. The proposed Greenview section originates at the existing compressor station within NE 26-67-5 W6M, approximately 62km southeast of Grande Prairie, Alberta extending southeast for approximately 15km to an existing valve site within NE 1-67-4 W6M.

The Project is located in Yellowhead County and within the Municipal District of Greenview No. 16.

Anticipated project schedule

Q1 2025	Engagement start
Q3 2025	Project notification submission to the CER
Q4 2025	Section 214 application filing with the CER
Q4 2026	Construction start
Q2 2028	Commercial in-service

Project benefits

The proposed Project will deliver well-designed and constructed infrastructure that provides short- and long-term economic benefits and also strengthens the economy at a local, provincial and national level:

Employment opportunities - Construction will require the services of equipment operators, welders, mechanics, truck drivers, labourers and more.

Business opportunities - Pipeline construction will create demand for local goods and services, including food and accommodation, hardware, industrial parts, automotive parts and servicing, fuel and more

Investment in Indigenous and local communities - Through our engagement with local communities, we will identify areas where we can help build stronger, more vibrant communities through initiatives with community partnerships in the areas of education, safety, community and environment.

Annual revenue to support local services - Project construction will result in tax payments to municipal, provincial and federal governments. When the Project is operational, annual tax payments will help support schools and hospitals, emergency services, recreation facilities, recycling programs and other local programs vital to sustaining communities.

Safety is our number one value

For more than 70 years, TC Energy has been a leader in the safe and reliable operation of North American energy infrastructure. The proposed Project will be designed, constructed, and operated in a safe and environmentally responsible manner. Once operational, in the unlikely event of an incident, our Emergency Preparedness and Response team would quickly and effectively respond to mitigate any impacts to public safety, property or the environment.

Engagement

Our approach to consultation and engagement with stakeholders, landowners, and Indigenous groups is focused on sharing information, understanding concerns and addressing issues related to our projects and operations. We engage early, often, and throughout the life of a project.
