

EASTERN PANHANDLE EXPANSION PROJECT

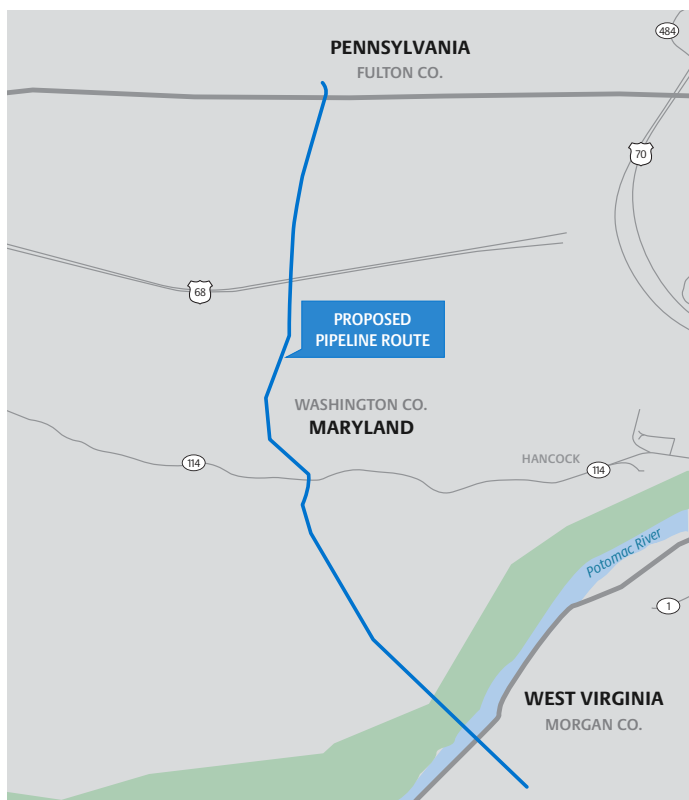

TC Energy periodically provides information beginning at the early stages of project development, including prospecting, and continuing throughout the life of assets. The information provided is intended to inform stakeholders and Indigenous groups of our proposed activities. As planning progresses and new information becomes available, details may change from the time of this printing.

OVERVIEW

The Eastern Panhandle Expansion project is being developed to support economic growth in the Eastern Panhandle region of West Virginia. Once complete, this new pipeline will provide more than 47 million cubic feet per day of reliable, clean burning natural gas to meet the energy needs of homes and businesses in Morgan County.

PROJECT SCOPE

The Eastern Panhandle Expansion project will construct approximately 3.4 miles (5.4 km) of 8-inch diameter pipeline, commencing at interconnections with Columbia's existing Line 1804 and Line 10240 in Fulton County, Pennsylvania, and extending through Washington County, Maryland, to a point of delivery with the local distribution company, Mountaineer Gas Company, in Morgan County, West Virginia.

ANTICIPATED PROJECT SCHEDULE

TC Energy has worked with FERC and other federal, state and local agencies to acquire the appropriate permits and perform an extensive environmental review of the project area prior to construction starting.

FERC filing	March 2017
FERC approval	July 2018
FERC Notice to Proceed	October 2024
Anticipated construction start	November 2024
Anticipated project in-service	June 2025
Restoration	June 2025

Throughout all stages of the project, we will continue to develop and maintain relationships with landowners and local communities along our footprint as we safely and responsibly deliver the energy people need—every day.

ABOUT TC ENERGY

We're a team of 7,000+ energy problem solvers working to safely move, generate and store the energy North America relies on. Today, we're delivering solutions to the world's toughest energy challenges – from innovating to deliver the natural gas that feeds LNG to global markets, to working to reduce emissions from our assets, to partnering with our neighbours, customers and governments to build the energy system of the future. It's all part of how we continue to deliver sustainable returns for our investors and create value for communities.
