

# Mainline 300 Fact Sheet

**TC Energy is proposing the Mainline 300 project, a replacement of two segments of pipe totaling 775 feet in Menifee and Montgomery Counties, Kentucky.**

The project will enhance the safety and reliability of Mainline 300, a 36-inch natural gas transmission line on TC Energy's Columbia Gulf Transmission system. Construction is slated to begin in June 2021, and the pipeline is expected to be placed in service by September 2021. Construction dates are subject to change depending on a variety of factors, including weather conditions and approval from the U.S. Federal Energy Regulatory Commission after review of TC Energy's recently submitted application (Docket No. CP20-490) for the project.

Building a positive working relationship with landowners and stakeholders near our project area is important to us. TC Energy is committed to ongoing communication with landowners, stakeholders and the community leading up to and through project completion. We work to make sure everyone impacted knows what to expect and who they can directly reach out to should a concern arise.

*For over 65 years, TC Energy has proudly delivered the energy that millions of North Americans rely on to power their lives and fuel industry. Guided by our values of safety, responsibility, collaboration and integrity, our more than 7,000 people are deeply rooted in their communities and ensure that we develop and operate our facilities safely, reliably and with minimal impact on the environment. We are committed to listening to our neighbors and we work with all our stakeholders to develop better project plans and create long-term opportunities and economic benefits in the communities where we operate across Canada, the United States and Mexico.*
