

# WISCONSIN RELIABILITY PROJECT

## The Project

TC Energy's Wisconsin Reliability Project is a set of projects designed to increase base system reliability and expand an existing portion of the ANR Pipeline Company ("ANR") system to serve markets in the midwestern U.S., while lowering emissions by approximately 30,000 metric tons CO<sub>2</sub>e (carbon dioxide equivalent) per year – the equivalent to removing more than 6,500 passenger vehicles from the road annually (collectively "WRP" or the "Project").

By expanding its system, ANR will be able to provide up to an incremental 144,000 dekatherms per day of natural gas capacity to local area distribution and electric generation companies in markets that have recently announced significant coal fired generation retirements. The Project's facilities include, in part, the installation of hybrid units with fuel switching capabilities for additional reliability to replace existing gas-powered compressor units along ANR's system.

The Project also involves replacing approximately 51-miles of smaller diameter, existing pipeline throughout Wisconsin and North Illinois with larger diameter, new pipeline to increase system efficiency and reliability while meeting the increased market demand. Additionally, this Project will upgrade and replace the current gas compression facilities with hybrid units at the Kewaskum and Weyauwega stations. This initiative will lead to a net decrease in the Project's direct greenhouse gas (GHG) emissions. Additionally, upgrades will be made to the existing meter stations in Lena, Merrill, Oshkosh, South Wausau, Stevens Point, and Two Rivers.

## Project Benefits

- **Environmentally Responsible with Reliability** – ANR is committed to avoiding energy outages that other parts of the country have experienced during recent weather events. Strategic replacement and upgrades of compression facilities at Kewaskum and Weyauwega and will include the installation of environmentally friendly hybrid units that are powered by electricity during normal operations but can transition to natural gas in the event of a power outage to ensure safe reliable service to our customers.
- **Climate Friendly** – The Project customer(s) will use WRP's capacity to aid in the planned retirement of coal generation and transition to their renewal energy portfolios.
- **Capacity Expansion** – ANR will be able to provide up to an incremental 144,000 dekatherms per day of natural gas capacity to enable adequate supply for growing energy demand in Wisconsin.

- **Economic Activity** – An economic impact report estimates that the Project would provide an estimated infusion of economic activity during construction that would support approximately:

- 4,313 jobs
- \$319.9 million in associated labor income
- \$1.1 billion in economic output
- \$67.9 million in local and state tax revenue

## PROJECT SCHEDULE (FUTURE EVENTS SUBJECT TO CHANGE)

February 2022	Pre-file FERC application submitted
October 2022	FERC application filed
December 2023	FERC Certificate issued
March 2024	FERC issued Notice-to-Proceed
November 2024	Anticipated construction begins
November 2025	Targeted Project In-service
2026	Land restoration completion

## About TC Energy

TC Energy is an energy infrastructure company that for more than 70 years – and in this area, over 100 years – operated pipelines, storage facilities and power-generation plants that support life in the U.S., Canada and Mexico safely, reliably and quietly.

We're a team of 7,000+ energy problem solvers working to move, generate and store the energy North America relies on. Today, we're taking action to make that energy more sustainable and more secure – while innovating and modernizing to reduce emissions from our business. Along the way, we invest in communities and partner with our neighbors, customers and governments to build the energy system of the future.

At TC Energy, our priority is to be a good neighbor. We recognize the importance of relationships with stakeholders and are committed to engaging them early in the project development process to understand their concerns and what matters to them throughout the duration of the project.

TC Energy is committed to notifying affected landowners, towns, communities and local, state and federal governments and agencies involved with the Project. If you have any questions about the Project, please reach out to us via the contact information below.
